

Council Report
August 4, 2010

The lagoon is very close to being in operation more than a month ahead of schedule. It is of sufficient size to handle growth many years into the future.

We continue to work with Sask Watershed Authority to determine the options for controlling lake levels this year and into the future.

Disaster Assistance Applications for private property are in the office. All those who have been negatively affected by this years high water levels can call the office to get more information.

Council has decided to improve the beach areas by adding sand and regular grooming to ensure that residents and visitors can enjoy themselves. We ask all those using the beaches to leave nothing but footprints.
